EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Spinelli on July 19, 2004.

The application has been amended as follows:

In claim 1, lines 25-26, "such that the cylindrical hollow member is constrained to only move in one optical-axis direction." has been deleted and -- such that backlash of the cylindrical hollow member is minimized. -- has been inserted.

In claim 4, lines 1-2, "according to claim 4" has been deleted and -- according to claim 1 -- has been inserted.

Reasons For Allowance

The prior art of record does not disclose or fairly suggest an apparatus for providing image pick up capability to an endoscope comprising in part a hermetically sealed portion containing both the optical elements and an imaging means wherein the imaging means is adjustable via a magnetic linkage to a control ring external to the sealed portion to provide focusing and an elastic member positioned between a member holding the imaging means and the sealed unit to limit backlash during adjustment. U.S. Patent 4,979,498 discloses a similar spring, yet fails to provide a reason for the spring, thus limiting any motivation for combining this capability to other art. Similarly, U.S. Patent 5,642,232 teaches the use of springs in a camera lens assembly to remove backlash, however, multiple springs are positioned around the periphery of the lens holder and the teaching is for optical elements only, not for an imaging device.
